

PRESS RELEASE

TWO NEW MANUFACTURERS AVAILABLE IN IMPELLER.NET PUMPSELECTOR

Dresden, Germany, July 20, 2020. Since the beginning of July, products of two further manufacturers, Papantonatos and Pentair, have been available in the pump selection tool on the impeller.net Internet platform. This extends the portfolio of pumps and lifting units, in particular, for sewage technology and drainage as well as products for water supply and irrigation to a very broad range of brands.

The PumpSelector of impeller.net brings buyers, manufacturers and sellers together on a new platform. The cross-manufacturer concept is unique in its technical detail depth and addresses a wide range of users. The application is very simple: interested parties enter the operating data and keywords for the area of application or the design and are shown suitable pumps according to their specifications. These can be sorted and filtered according to various criteria. The next step is to select the available options in the configuration, such as material design or connection. The possibility of directly comparing pump models is particularly helpful. Once the right pump has been found, the system immediately checks whether the product is available in one of the connected web shops (e.g. eBay, special pump web shops, web shops of the manufacturers). If necessary, the product can be ordered there immediately.

Papantonatos extends the available range to submersible pumps. Based in Greece, the company has been manufacturing pumps tailored to customers' needs for 55 years. It offers a complete line of wastewater pumps, distinguished by their installation and maintenance-friendly design. A whole array of design features make them among the most versatile pumps on the market. The company's portfolio also includes construction pumps for corrosive and abrasive applications as well as borehole pumps for raw water supply, irrigation systems, groundwater lowering, pressure boosting and various industrial applications.

Another novelty in the offer are Pentair Jung Pumpen's sewage and drainage pumps as well as Pentair Sta-Rite's fresh water pumps. Jung Pumpen, a German company with 90 years of experience, is a strong partner in the HVAC industry. Its range of pumps extends from small lifting systems to large pumps for use in municipal wastewater disposal. The pumps of the Italian company Pentair Sta-Rite cover the entire range of applications from fresh water supply in domestic and municipal applications to fire fighting.

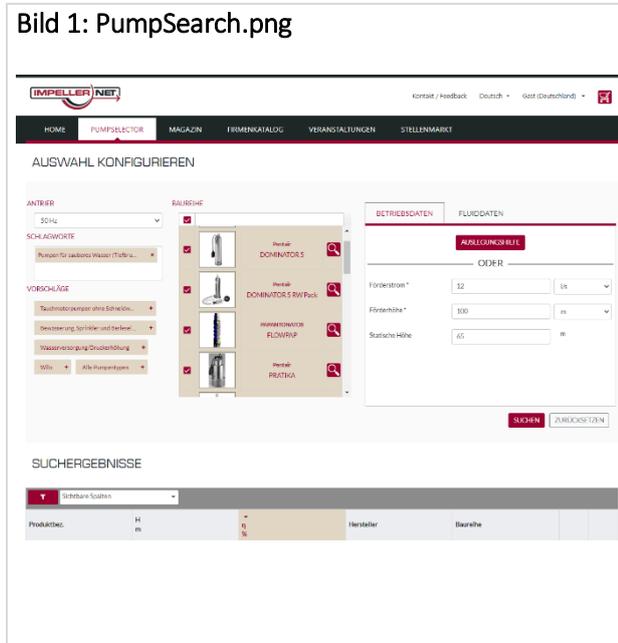

Thanks to the new products, the impeller.net PumpSelector offers an even more efficient way for tradesmen and planners in particular to search for and find products that match their needs. Together with the products of Shakti, Tsurumi, Wilo and Zenit, which have been integrated since the beginning of the year, users can now select and compare products from a wide range.

"We are very pleased to have won Pentair and Papantonatos as two pump manufacturers for impeller.net, both known in the market for their high-quality products and excellent service. This expands the platform to a unique range of brands, especially in the fields of wastewater and sewage technology as well as water supply applications. As a result, users will be able to compare different options for their application across manufacturers and select the best pump for their needs", says Jens-Uwe Vogel, Managing Director of VSX - VOGEL SOFTWARE, the platform's operator, welcoming the new suppliers. "We will continuously expand the range of available manufacturers in order to provide users with an increasingly efficient tool. In addition, our developers are constantly working on expanding and optimizing the portal to ensure that it offers users maximum benefit", Jens-Uwe Vogel outlines the further expansion.

VSX – VOGEL SOFTWARE develops applications for sizing, selection, configuration and sales of pumps and engineered products in the fluid handling industries combined with solutions for business process automation. The software solutions substitute conventional product catalogues and thus simplify the sales processes of producers as well as users. Moreover, the software users profit from additional applications like the technical calculation, complex product configurations as well as offers and technical documents producible directly in the system.

VSX - VOGEL SOFTWARE was founded by the brothers Vogel, Hanns-Henrik and Jens-Uwe, in Dresden in 1993 and has been growing continuously ever since. Due to the intensive international orientation, the company generates more than 60% of its turnover outside of the domestic market Germany.
